ease™
performance fabrics

Ease Performance Fabrics® are an environmentally responsible, high performance technology that enhances a fabrics' durability and cleanability without sacrificing its luxurious look and feel.

Ease Performance Fabrics® have been engineered to work with all fibers and yarn types, making it easy to use in a broad range of applications. This environmentally friendly, PFAS free technology adds a level of protection to your purchase making everyday life a little easier!

General Care

We recommend vacuuming regularly with an upholstery attachment.

- Flip, rotate and fluff removable cushions regularly to ensure even wear.
- An annual professional extraction cleaning will keep your upholstered furniture looking its best.
- Promptly treat spots and stains to reduce soil build up on a fabric's surface.
- Do not rub or brush excessively as it may cause fuzzing.
- Cleaning Code = W (water with a mild enzyme detergent, see instructions below)

Routine Spot Cleaning

1. First, blot away excess liquids using a dry towel and brush off any loose debris.

2. Prepare a cleaning solution of a ¼ teaspoon of a mild detergent (such as Tide detergent or Dawn dishwashing liquid) and 1 cup of lukewarm water.

3. Apply the cleaning solution using a misting spray bottle and allow the solution to soak into the fabric, but do not oversaturate as leftover soap residue can attract dirt.

4. Work the solution into the affected area by lightly scrubbing it with a towel or sponge. Make sure to work from the outside of the stain inward.

5. Rinse thoroughly with clean water to remove all soap residue.

6. Blot excess moisture with a clean towel.

7. Allow fabric to air dry to evaluate if further care is required.

8. Repeat steps 3 - 6 as needed.

Spot Cleaning for Oil-Based Stains

To treat more challenging stains such as salad dressing, immediately apply an absorbent, such as cornstarch, directly on the stain. Let the absorbent sit for 10 minutes to help lift the stain. Remove the excess using a straight edge or ruler to prevent the stain from being pressed into the fabric. It is imperative to utilize vacuum extraction to remove any excess absorbent. Follow with the routine spot cleaning process. *Some stains, like permanent marker, mustard or nail polish may not be completely removable.
